

COVIDSURG-CANCER CLOSING CHECKLISTS

Group 1

You are including both operated and non-operated patients

- We have completed the team classification form for each contributing speciality in our hospital <https://is.gd/cancerfollowup>
- We have identified all eligible patients from our hospital who had an operation, during the 3-month period from the date of emergence of COVID-19.
- We have identified all eligible patients either waiting for surgery at the start of the pandemic or diagnosed during the first 3 months of the pandemic who would have had surgery under normal circumstances and did not have an operation (delayed or treated with an alternative therapy) before the end of follow-up (August 31st 2020)
- We have kept a record of all patients linked local Medical Record numbers and REDCap IDs: <https://drive.google.com/file/d/1az1eP9-UcJFqwdYXqPFlgwkJHf2cqfjn/view?usp=sharing>
- We have entered all operated patients into REDCap with 30-day postoperative follow-up outcomes data.
- We have entered all non-operated patients into REDCap.
- We have updated non-operated patient follow-up as near as possible to 31st August 2020, and recorded the latest date of follow-up on the "Management" form on REDCap.
- We understand that the database will close on the 31st August 2020 after which any new patients will not be included in the analyses. Any new centres joining the study will not be added as collaborating authors.
- We understand that our patients will be included in analyses (and our collaborators will be included in the authorship) for papers both describing outcomes of operated and non-operated patients.

Group 2

You are including **only operated patients**, where no record has been kept of patients who are delayed or would have had surgery and have now had non-operative management.

We have completed the team classification form for each contributing speciality in our hospital <https://is.gd/cancerfollowup>

We have identified all eligible patients who had an operation, during the 3 month period from the date of emergence of COVID-19 in our area.

We have kept a record of all patients linked local Medical Record numbers and REDCap IDs: <https://drive.google.com/file/d/1az1ePg-UcJFqwdYXqPFlgwkJHf2cqfjn/view?usp=sharing>

We have entered all operated patients into REDCap with 30 day postoperative follow-up outcomes data.

We understand that the database will close on the 31st July 2020 after which any new patients will not be included in the analyses. Any new centres joining the study will not be added as collaborating authors.

We understand that our patients will be included in analyses (and our collaborators will be included in the authorship) for papers describing outcomes of operated patients only.
